

Managers Comment

We are currently helping our clients when their NOD32 anti-virus is due for renewal to upgrade to ESET Security Suite. The cost increase is minimal but the benefits include a firewall for increased security plus also a very active antispam filter. So if you are getting sick of that damn spam then talk to our guys today. The guys have been busy in the workshop of late especially with virus infected equipment so please be careful where you surf and the links you click on. Want to know how fast your Internet is going then head along to www.speedtest.net. Remember that speeds can vary at certain times of the day. We are now on Facebook. I'm hearing some of you saying that Facebook is not for you but many companies are now using facebook or other social media channels to promote services. If you are a Facebook fan then add us as a friend and get weekly tips and more. Until next time take care
Ewen

ESET NOD32 Antivirus vs ESET Security Suite

KEY BENEFITS	ESET NOD32 Antivirus 4	ESET Smart Security
High Detection Rates	X	X
ThreatSens Heuristics	X	X
Fast Scanning Speed	X	X
Low System Footprint	X	X
Personal Firewall		X
Anti-spam		X

IT Jargon

Here are a few words explained that you might hear when discussing computers.

Java - It is the underlying technology that powers state-of-the-art programs including utilities, games, and business applications. There are lots of applications and websites that won't work unless you have Java installed.

PDF - (Portable Document Format) is a universal file format that preserves all the fonts, formatting, graphics, and colour of any source document, regardless of the application and platform used to create it.

Adobe Acrobat - provides tools for viewing, creating, and editing PDF files.

Adobe Reader - allows you to view, print, annotate, and digitally sign, but not edit or create, PDF files.

Memory or RAM - where the computer holds whatever you are currently working on. The contents of memory/ram are lost when the computer is switched off.

TIP OF DAY - FLIP YOUR SCREEN

Have you ever accidentally flipped your desktop screen, here is an easy way to get it back to normal using your arrow keys, (note this is how you can change it as well) Press CTRL + ALT + the up or down arrow key,
or

Right click on the icon down the bottom right hand of your desktop that looks like a monitor - there will be an option there to rotate the screen

FOR A TIP OF THE WEEK FIND US ON FACEBOOK AND 'LIKE' OUR PAGE!

Recycling

Have some old Computers/Monitors lying around taking up space?

Talk to any of the team at CWC today about how we can help & recycle that equipment for you.
